

Test Groups

Manage Test groups from this screen.

The test groups that can be created are used when adding tests to a sample.

For example, if a sample requires a Purity, Germ & Noxious exam, you can create a group called “Complete” and add those three tests to the group. Then when creating a sample instead of individually selecting the Purity, Germ and noxious tests, you can simply select the “Complete” group and all three tests will be added to the sample.

Tests In Group

	Test Name	Exists
Add a Test	<input type="text"/>	
<input checked="" type="checkbox"/>	Germination	OK
<input checked="" type="checkbox"/>	Noxious exam	OK
<input checked="" type="checkbox"/>	Purity	OK

System Test groups

These groups have specific function in Pure Harvest, some should be modified with caution.

lab_reference_tests - These are the tests that a customer can request. They appear in the list of individual tests that can be added to a sample, and in the list of requested tests on the label/lab card, and the lab report.

billable_tests - A charge will be created for any tests in this list, if that test is on the sample. See Define Fees for how to set up pricing for these tests.

export_test - These tests will be made available to the customer online when a sample is released.

Lab other tests list - These tests will appear in the other determinations section of the analysis_report.
