

RELEASE NOTES

12/8/2022 9:36:58 AM

All customers are currently on release version8b.  
Pure Harvest Release 8d is being rolled out.

This is a new more portable version of PH.  
All configuration information has been moved into System Variables.

There is no difference in the application screens.  
Everything should continue to work with no restarts.

The old version and links will continue to work while we do the migration.  
After that the old links will be redirected to the new version.

We are skipping version8c because it was never finalized for release.
