2024 April

phmenu

ph admin, 2024/04/04 09:09

I added some links to phmenu on ransom @ amz5 These link to the workflow/exports page and are organized to present links to the exports by grouo.

Currently:

- Exports
- Billing x
- Certification +
- Crops x
- Custom x
- Fields +
- Financial x
- Foundation+
- Organics +
- Seed Testing +

For Ver9c I have made a combined menu in phlib2. I recreated the rowid and the primary key like this

```
alter table phlib2.base_menu drop column row_id ;
alter table phlib2.base_menu add column row_id serial ;
```

I haven't figured out how to copy rows from this menu table back into individual phclient databases. Some customers have unique menu items so those menu items need to be protected.

phelp

phelp is designed to support documentation in PDF form. The goal is to have a document for every file in the phapp system and to know which files are not documented. The audience for the PDF can be a customer, a prospect or internal programmers.

detail notes

I modified ./include/scripts/pureharvest.js to call the amz5 help page instead of the www.pureharvest page.
